Early Plastics

Early Plastics

Plastics often evoke an emotional response: people may love them or hate them. Examining aspects of their historical, technological, social and design development, this work sets plastics in their proper context. It puts to rest some of the myths associated with early plastics and explains why they developed from the pioneering days of the mid-19th century, when some experiments took place in kitchens, and how early manufacturers provided the foundation for the modern plastics industry. The work also investigates people's reactions to plastics, and the way in which designers adapted the new materials. Early misconceptions about these materials are also brought to light. The book shows, too, how plastics gradually became accepted into everyday life, to the extent that they are now an integral part of many technologies and industries. Also included is a catalogue of the collections dating from 1850 to 1950, housed at the Science Museum, London.
