Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology)

Martin Gollery

Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology) Martin Gollery

Demonstrating that many useful resources, such as databases, can benefit most bioinformatics projects, the **Handbook of Hidden Markov Models in Bioinformatics** focuses on how to choose and use various methods and programs available for hidden Markov models (HMMs).

The book begins with discussions on key HMM and related profile methods, including the HMMER package, the sequence analysis method (SAM), and the PSI-BLAST algorithm. It then provides detailed information about various types of publicly available HMM databases, such as Pfam, PANTHER, COG, and metaSHARK. After outlining ways to develop and use an automated bioinformatics workflow, the author describes how to make custom HMM databases using HMMER, SAM, and PSI-BLAST. He also helps you select the right program to speed up searches. The final chapter explores several applications of HMM methods, including predictions of subcellular localization, posttranslational modification, and binding site.

By learning how to effectively use the databases and methods presented in this handbook, you will be able to efficiently identify features of biological interest in your data.

From reader reviews:

Marjorie Ingram:

Now a day people that Living in the era exactly where everything reachable by match the internet and the resources within it can be true or not call for people to be aware of each information they get. How many people to be smart in acquiring any information nowadays? Of course the reply is reading a book. Looking at a book can help persons out of this uncertainty Information especially this Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology) book because this book offers you rich details and knowledge. Of course the information in this book hundred per-cent guarantees there is no doubt in it you probably know this.

Lila Smith:

Information is provisions for individuals to get better life, information nowadays can get by anyone with everywhere. The information can be a information or any news even a concern. What people must be consider when those information which is in the former life are challenging be find than now's taking seriously which one is suitable to believe or which one often the resource are convinced. If you find the unstable resource then you obtain it as your main information you will see huge disadvantage for you. All of those possibilities will not happen in you if you take Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology) as your daily resource information.

Katherine Wilcoxon:

Typically the book Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology) has a lot of knowledge on it. So when you make sure to read this book you can get a lot of help. The book was written by the very famous author. The author makes some research ahead of write this book. This kind of book very easy to read you will get the point easily after reading this article book.

Robert Quinonez:

Some people said that they feel bored stiff when they reading a guide. They are directly felt this when they get a half elements of the book. You can choose typically the book Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology) to make your own personal reading is interesting. Your current skill of reading skill is developing when you including reading. Try to choose basic book to make you enjoy to learn it and mingle the impression about book and examining especially. It is to be very first opinion for you to like to wide open a book and go through it. Beside that the e-book Handbook of Hidden Markov Models in Bioinformatics (Chapman & Hall/CRC Mathematical and Computational Biology) can to be your brand-new friend when you're feel alone and confuse using what must you're doing of the time.
