Numerical Simulation of Reactive Flow

Elaine S. Oran, Jay P. Boris

Numerical Simulation of Reactive Flow Elaine S. Oran, Jay P. Boris

Reactive flows encompass a broad range of physical phenomena, interacting over many different time and space scales. Such flows occur in combustion, chemical lasers, the earth's oceans and atmosphere, and in stars. Because of a similarity in their descriptive equations, procedures for constructing numerical models of these systems are also similar, and these similarities can be exploited. Moreover, using the latest technology, what were once difficult and expensive computations can now be done on desktop computers. This new edition of a highly successful book presents algorithms useful for reactive flow simulations, describes trade-offs involved in their use, and gives guidance for building and using models of complex reactive flows. It takes account of the explosive growth in computer technology and the greatly increased capacity for solving complex reactive-flow problems that has occurred since the previous edition was published more than fifteen years ago. An indispensable guide on how to construct, use, and interpret numerical simulations of reactive flows, this book will be welcomed by advanced undergraduate and graduate students, and a wide range of researchers and practitioners in engineering, physics, and chemistry.

From reader reviews:

Michael Cardona:

Reading a reserve tends to be new life style within this era globalization. With reading you can get a lot of information that could give you benefit in your life. With book everyone in this world can share their idea. Textbooks can also inspire a lot of people. Many author can inspire all their reader with their story or perhaps their experience. Not only the storyplot that share in the textbooks. But also they write about the ability about something that you need illustration. How to get the good score toefl, or how to teach your children, there are many kinds of book that you can get now. The authors on earth always try to improve their ability in writing, they also doing some exploration before they write to their book. One of them is this Numerical Simulation of Reactive Flow.

Jose Scott:

Playing with family in a park, coming to see the sea world or hanging out with friends is thing that usually you may have done when you have spare time, subsequently why you don't try point that really opposite from that. One particular activity that make you not sense tired but still relaxing, trilling like on roller coaster you are ride on and with addition of information. Even you love Numerical Simulation of Reactive Flow, you can enjoy both. It is very good combination right, you still want to miss it? What kind of hang type is it? Oh come on its mind hangout people. What? Still don't understand it, oh come on its known as reading friends.

Jimmy Martinez:

Are you kind of stressful person, only have 10 or even 15 minute in your day to upgrading your mind skill or thinking skill even analytical thinking? Then you are experiencing problem with the book as compared to can satisfy your small amount of time to read it because all of this time you only find book that need more time to be go through. Numerical Simulation of Reactive Flow can be your answer mainly because it can be read by a person who have those short time problems.

Eric Sanders:

What is your hobby? Have you heard in which question when you got pupils? We believe that that problem was given by teacher to the students. Many kinds of hobby, Everybody has different hobby. And you know that little person such as reading or as studying become their hobby. You need to understand that reading is very important and also book as to be the issue. Book is important thing to add you knowledge, except your personal teacher or lecturer. You get good news or update in relation to something by book. Many kinds of books that can you choose to use be your object. One of them is this Numerical Simulation of Reactive Flow.
